

ENHANCED VALUE THROUGH INFRARED TECHNOLOGY

UNCOVER HIDDEN ISSUES WITH THERMAL IMAGING

Infrared (thermal imaging) is an advanced, non-invasive heat seeking technology that allows the inspector to show you things about your home, issues that can't be revealed using conventional inspection methods. Whether you need help targeting a concealed issue in your home, or want to make sure nothing is lurking hidden behind walls or ceilings before you purchase, thermal imaging can help detect moisture-related and other potentially serious issues.

Client benefits include:

Enhanced insight into the home inspection

Avoiding discovery of costly issues AFTER you move in

Increased safety with serious electrical issues more easily identified

INFRARED TECHNOLOGY CAN IDENTIFY:

- Hidden water damage
- Appliance conditions
